

# Stair Anti-Slip Nose With ENECON Products

One of our major customers in Rayong was having a safety problem with slipping on wet platform stairs in their plant. The 3M anti-slip stickers previously used gives very poor lifetime and wear off easily. Also the 3M solution could not withstand the chemicals used in customer plant.

Enecon Thailand successfully solved this problem in 2020 by supplying a new “stairway nose” on nearly 700 stairs in customer plant. We manufactured the “noses” and applied our yellow colored Chemclad GP coating and further applied aluminum oxide grit to make a chemically resistant anti-slip surfaces on the stair nose.

Now nearly 1 year later, we did a site survey on this job and interviewed the customer. They are very pleased with our solution as this has given more than 2 times the lifetime of 3M stickers and increased safety due to the size of ALO2 grit applied. We expect customer will repeat the order for this solution at another part of their plant soon.
