

PSS Wins Refinery LTSA Contract

PSS was recently awarded a prestigious 5 year contract for maintenance and repair of all rotating equipment at a major refinery in Thailand. The contract includes equipment such as gas turbines, steam turbines, compressors, pumps, blowers, gearboxes, and other rotating equipment. The scope of work includes activities like major overhaul, minor overhaul, seal and bearing replacement, preventative maintenance activities. etc.

To fulfill this major responsibility, PSS had to relocate nearly 20 persons permanently at customer site. The entire team had to undergo a full 1 month training on customer safety practices, company policies, and other working procedures. This has been a major challenge to find so many highly skilled persons during Covid-19 when our existing workload is already quite high. Another major challenge for us is to work with customer closely as if we are one team - scheduling upcoming jobs, planning for manpower and tools, planning for safety, preparation of working documents, while of course controlling the costs.

We are very grateful to have a very kind customer who has helped us adapt to the working environment and understand the working culture inside a refinery. Soon we hope to be in a position where we can add more value by providing new solutions related to asset management and energy efficiency of rotating equipment.
